

IN THE CLAIMS

Please amend claim 13 as follows:

1. (Original) A display apparatus having a plurality of pixels, comprising:
 - a first electrode formed on a substrate;
 - a light emitting layer formed on said first electrode; and
 - a second electrode formed on said light emitting layer, wherein:
 - said plurality of pixels are partitioned by a rib larger in thickness than said light emitting layer and having at least a conductive material; and
 - said conductive material is electrically connected to said second electrode.
2. (Original) The display apparatus as claimed in Claim 1, wherein said rib additionally has an insulating material layer.
3. (Original) The display apparatus as claimed in Claim 1, wherein said rib has a mesa-formed section such that the width of which becomes wider toward said substrate.
4. (Original) The display apparatus as claimed in Claim 2, wherein said rib has a mesa-formed section such that the width of which becomes wider toward said substrate.
5. (Original) The display apparatus as claimed in Claim 1, further comprising:
 - a protective film made of an insulating material or a conductive material and formed on said second electrode; and
 - a second substrate stacked on said protective film.
6. (Original) The display apparatus as claimed in Claim 5, further comprising a photo-curing resin layer provided between said protective film and said second substrate.

7. (Original) The display apparatus as claimed in Claim 1, wherein an insulating film is formed under said rib.

8. (Original) The display apparatus as claimed in Claim 1, wherein said rib is formed in an island form.

9. (Original) The display apparatus as claimed in Claim 2, wherein said rib is formed in an island form.

10. (Original) The display apparatus as claimed in Claim 1, wherein said second electrode is integrally formed over said plurality of pixels.

11. (Original) The display apparatus as claimed in Claim 1, wherein said second electrode and the conductive material are individually made of different materials.

12. (Original) The display apparatus as claimed in Claim 1, wherein said first electrode is higher in reflectivity of light than said second electrode.

13. (Currently Amended) A display apparatus having a plurality of pixels, comprising:

a field effective transistor formed on a substrate and having a first electrode, and a second electrode ~~and a third electrode;~~

an interlayer insulating film formed on said field effective transistor;

a lower electrode connected to said first electrode through an opening formed as penetrating said interlayer insulating film;

an upper electrode formed on the organic layer, wherein:

said plurality of pixels are partitioned by a rib larger in thickness than said organic layer and having at least a conductive material; and

said conductive material is electrically connected to said upper electrode.

14. (Original) The display apparatus as claimed in Claim 13, wherein said rib additionally has an insulating material layer.

15. (Original) The display apparatus as claimed in Claim 13, wherein said rib has a mesa-formed section such that the width of which becomes wider toward said substrate.

16. (Original) The display apparatus as claimed in Claim 14, wherein said rib has a mesa-formed section such that the width of which becomes wider toward said substrate.

17. (Original) The display apparatus as claimed in Claim 13, further comprising:
 a protective film made of an insulating material or a conductive material and formed on said second electrode; and

 a transparent substrate stacked on said protective film.

18. (Original) The display apparatus as claimed in Claim 17, further comprising a photo-curing resin layer provided between said protective film and said transparent substrate.

19. (Original) The display apparatus as claimed in Claim 13, wherein an insulating film is formed under said rib.

20. (Original) The display apparatus as claimed in Claim 13, wherein said rib is formed in an island form.

21. (Original) The display apparatus as claimed in Claim 14, wherein said rib is formed in an island form.

22. (Original) The display apparatus as claimed in Claim 13, wherein said upper electrode is integrally formed over said plurality of pixels.

23. (Original) The display apparatus as claimed in Claim 13, wherein said upper electrode and said conductive material are individually made of different materials.

24. (Original) The display apparatus as claimed in Claim 13, wherein said lower electrode is higher in reflectivity of light than said upper electrode.

25. (Original) The display apparatus as claimed in Claim 13, wherein said organic layer has an electron transport layer for transporting electrons and a hole transport layer for transporting holes.

26. (Original) The display apparatus as claimed in Claim 13, wherein said field effective transistor is a field effective transistor of bottom-gate type.

27. (Original) The display apparatus as claimed in Claim 13, wherein said rib is sub in-roughly positioned above the opening.

28-45. (Withdrawn)

46. (New) The display apparatus as claimed in Claim 1, wherein said rib comprises a conductive layer that incorporates said conductive material, and an insulating layer formed on said conductive layer.

47. (New) The display apparatus as claimed in Claim 46, further comprising:
an upper electrode formed over said rib and electrically connected to said conductive layer of said rib; and

a protective film formed over said upper electrode, wherein both said upper electrode and said protective film are light transmissive.

48. (New) The display apparatus as claimed in Claim 47, wherein said protective film comprises an insulating material formed on said upper electrode.
